GREEN NORTH

Konferens: Vad skall vi använda avloppsslammet till i framtiden?
2020-03-13. Sunderby Folkhögskola, Luleå

Nils Skoglund

Research fellow at the Department of Applied Physics and Electronics, Umeå University

Nils Skoglund has a PhD in Energy Technology with specialization in Thermal Process Chemistry and his research focus lies in thermal conversion of residual streams from biomass or waste, including industrial effluents, and developing tools to affect the resulting ash fractions to have desirable properties.
Nils Skoglund's expertise is in chemical characterization of complex inorganic mateirals with X-ray based analytical techniques, chemical equilibrium thermodynamics, and fuel blend design for thermal processes. He has worked for several years with sludge from municipal wastewater treatment plants with the focus on formation of ash fractions suitable for resource recovery.
